

Use Case: Place Medicine Order

Main Success Scenario

1. Customer searches for the required medicines.
2. Customer selects the required medicines and adds them to the order.
3. If required, customer uploads/scans the doctor's prescription.
4. Customer specifies quantities and clicks **“Place Order.”**
5. Pharmacist verifies the prescription, if applicable.
6. Pharmacist checks medicine availability.
7. Pharmacist prepares the medicine order.
8. Pharmacist clicks **“Ready for Pickup.”**
9. System sends a notification to the customer.
10. Customer arrives, collects the medicines, receives the receipt, and leaves.

Alternate Flow A — Medicine Unavailable

1. Pharmacist finds that a requested medicine is unavailable.
2. System notifies the customer.
3. Customer chooses an alternative medicine or cancels that medicine.
4. Pharmacist continues preparing the remaining order.

Alternate Flow B — Invalid Prescription

1. Pharmacist finds that the prescription cannot be verified.
2. System informs the customer.
3. Order is cancelled.
4. Customer is not given the prescription-required medicines.
