NAME: T B AKASH
SRN: PES1UG24AM299
SCENARIO – 30
SE LAB – 02

## Epic 1: Claim Submission & Validation

*Description: Enable passengers to report missing luggage securely using their booking details.*

| User Story | As a... | I want to... | So that... |
|---|---|---|---|
| **Story 1.1: Submit Claim** | passenger | provide my PNR and baggage tag details to register a lost baggage claim | my missing baggage can be reported and a unique claim ID can be generated |
| **Story 1.2: Validation** | system | check the PNR and baggage tag details against airline records before accepting the claim | incorrect claim information can be detected and corrected before submission |

## Epic 2: Baggage Tracing & Recovery

*Description: Automate the discovery and tracking process for lost luggage.*

| User Story | As a... | I want to... | So that... |
|---|---|---|---|
| **Story 2.1: CrossReference Logs** | system | compare lost baggage reports with baggage scanning records | matching baggage can be identified quickly for recovery |
| **Story 2.2: Manual Status Updates** | Baggage Service Agent | update the baggage's current location and tracking status manually | the recovery progress remains accurate and can be monitored properly |

## Epic 3: Passenger Notifications

*Description: Keep passengers updated on their claim status to reduce support desk volume.*

| User Story | As a... | I want to... | So that... |
|---|---|---|---|
| **Story 3.1: RealTime Alerts** | passenger | get instant SMS and email updates whenever the status of my baggage changes | I can keep track of my baggage without repeatedly contacting the support team |

## Epic 4: Compliance & Compensation

*Description: Ensure compliance with international aviation passenger rights.*

| User Story | As a... | I want to... | So that... |
|---|---|---|---|
| **Story 4.1: Automated Compensation** | passenger | receive a compensation form automatically when my baggage remains lost for more than 21 consecutive days | I can submit my compensation claim easily while following applicable aviation regulations |

## Epic 5: System Performance & Security

*Description: Ensure a secure, fast, and responsive user experience.*

| User Story | As a... | I want to... | So that... |
|---|---|---|---|
| **Story 5.1: High-Speed Timeline API** | passenger | access my complete multi-leg baggage scan history within 200 ms | I can view my baggage journey quickly without delays |
| **Story 5.2: Data Encryption** | system administrator | secure all Passenger Personally Identifiable Information (PII) using appropriate encryption | sensitive passenger information remains protected against unauthorized access and data breaches |

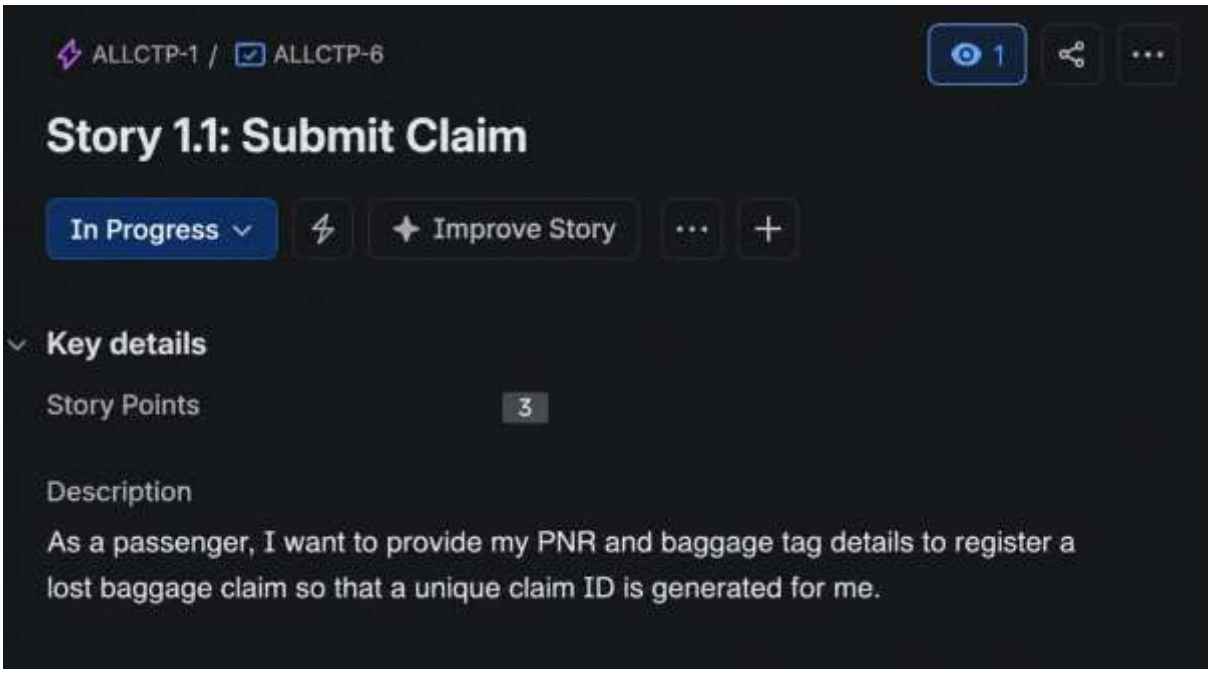

# Deliverables:

## 1)EPICS AND STORIES CREATED

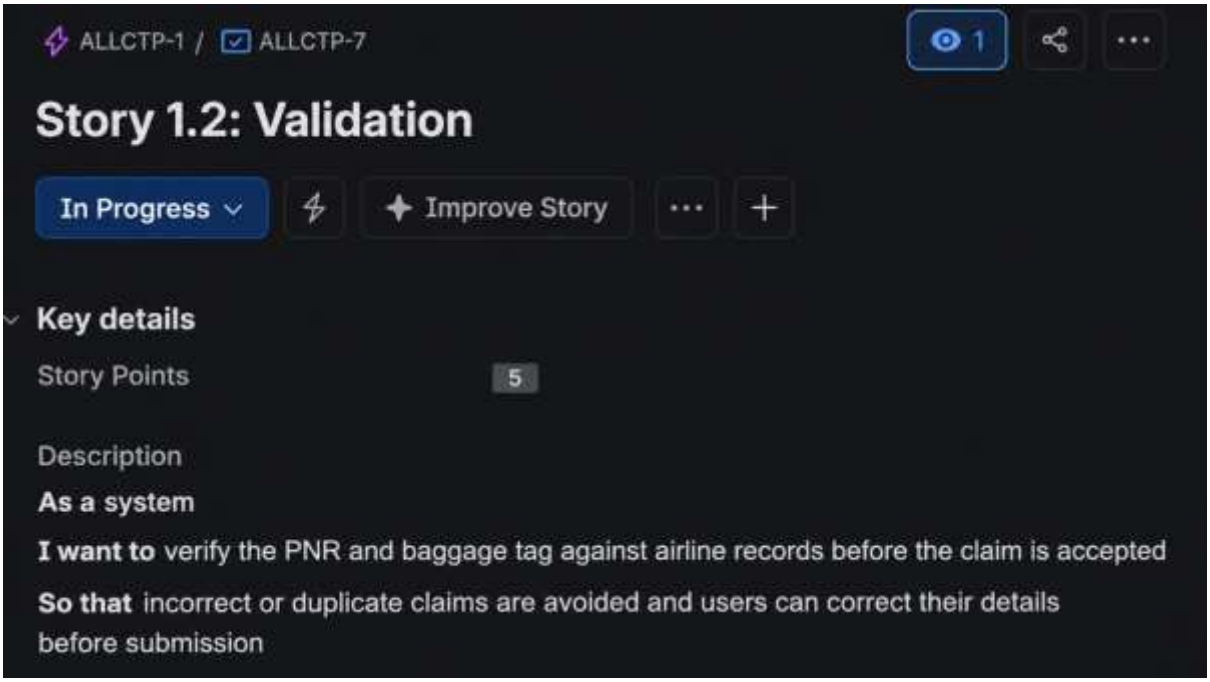

i)Epic1:

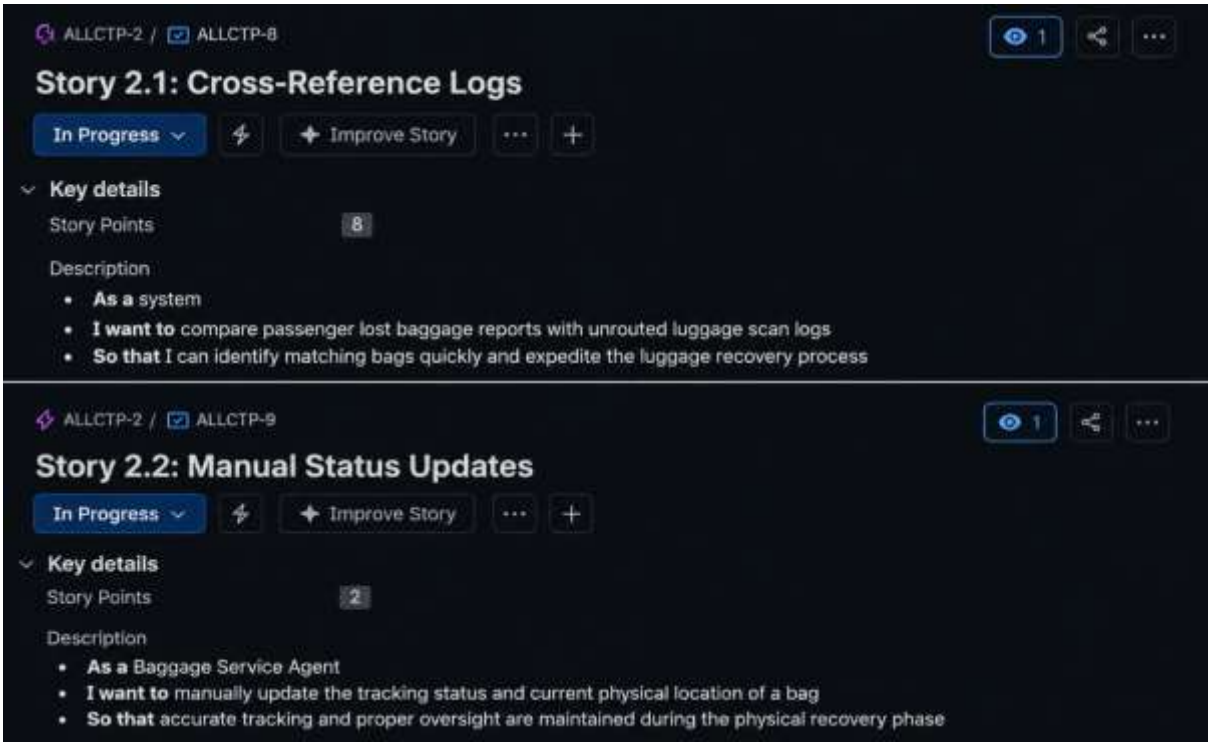

story1.1

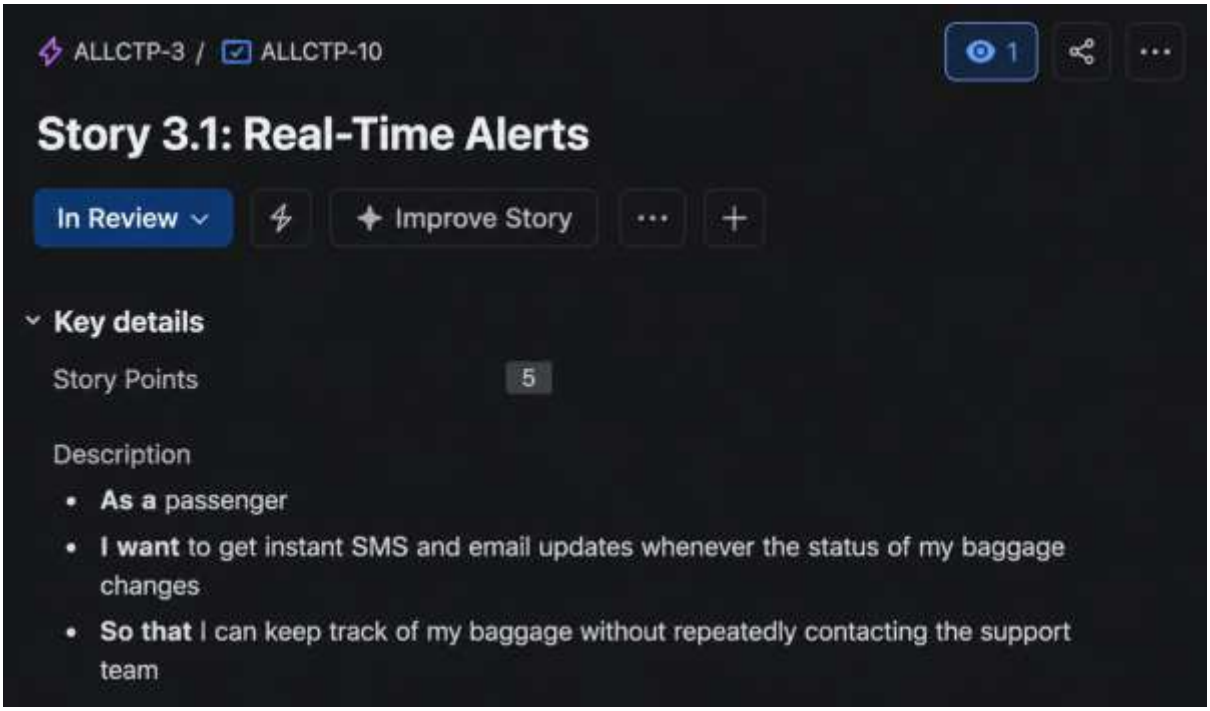

Story1.2

ii)Epic2 story2.1 ,2.2

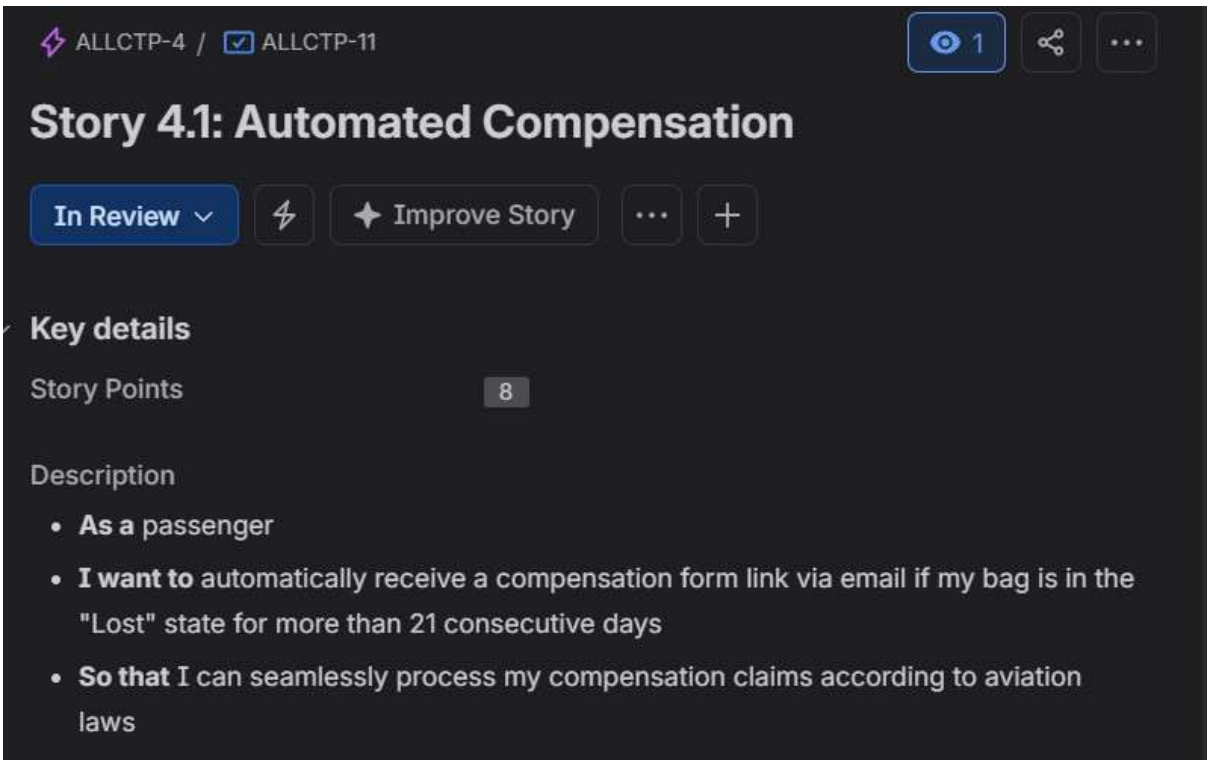

iii)Epic3 story3.1

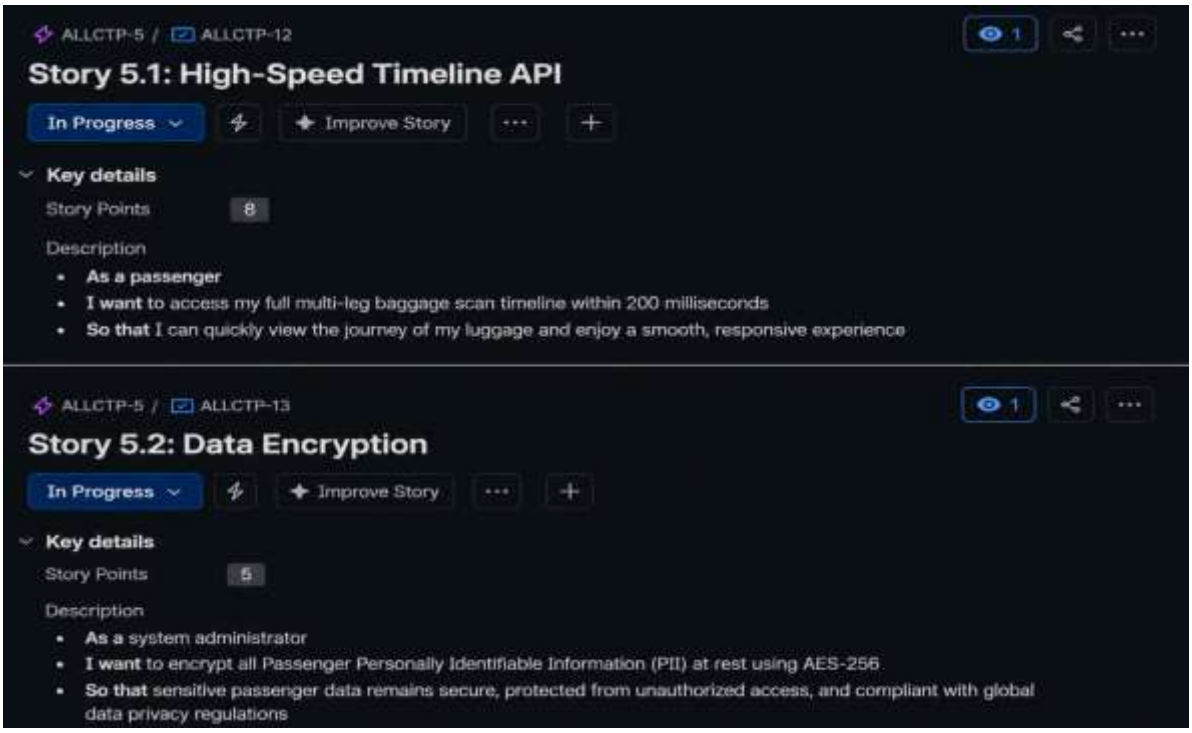

iv)Epic 4

story4.1

v)Epic 5

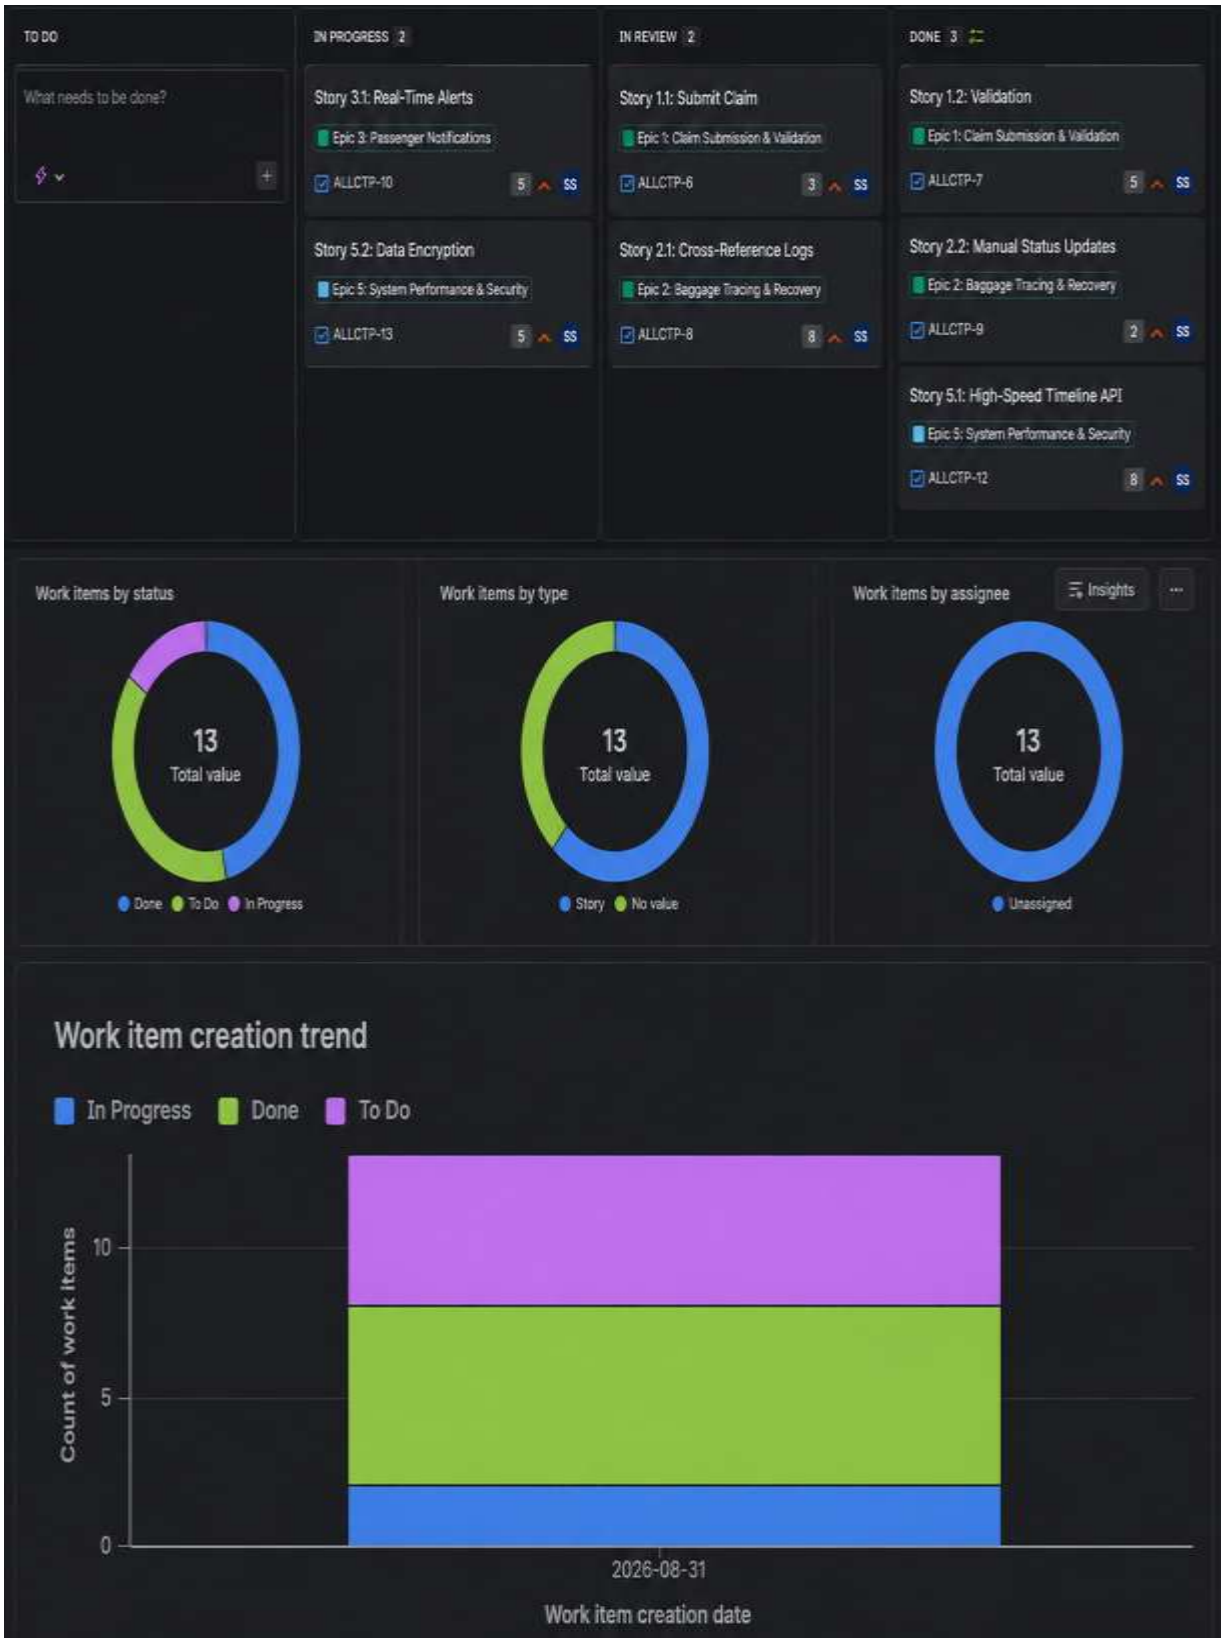

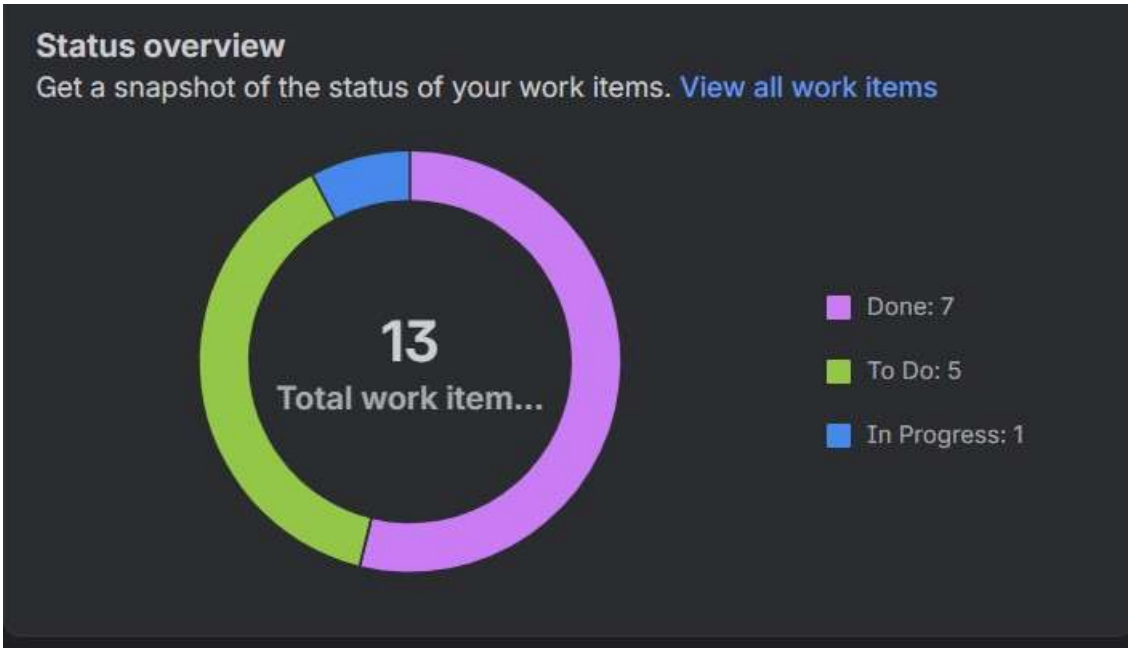

## 2)SPRINT, BURNOUT, AND SUMMARY:

## DURATION 1 WEEK:

## DURATION 2 WEEKS :

# 4)COMMENTS AFTER SPRINTS FOR EPICS:

Epic1:

Sprint completed successfully. The user interface for the claim submission is fully operational. We have verified that the system accurately validates the PNR and Baggage Tag Number against the mock airline database, preventing invalid submissions as required

Epic 2:

All stories for this Epic are marked as Done. The cross-referencing algorithm successfully matches lost reports with unrouted luggage logs. Additionally, Baggage Service Agents can successfully execute manual status updates, and the system correctly logs their agent ID and timestamp

## Group Reflection: Agile Workflow & Sprint Simulation

This lab gave us practical experience in transforming a traditional requirements document for the Airport Lost Luggage Claim system into an organised and interactive Jira backlog. By converting the functional requirements into Epics and User Stories, we were able to understand how Agile development focuses on user needs and the value delivered through each feature.

Working with the sprint cycle helped us understand how teams plan, prioritise, and track their tasks during development. Assigning Story Points using the Fibonacci sequence helped

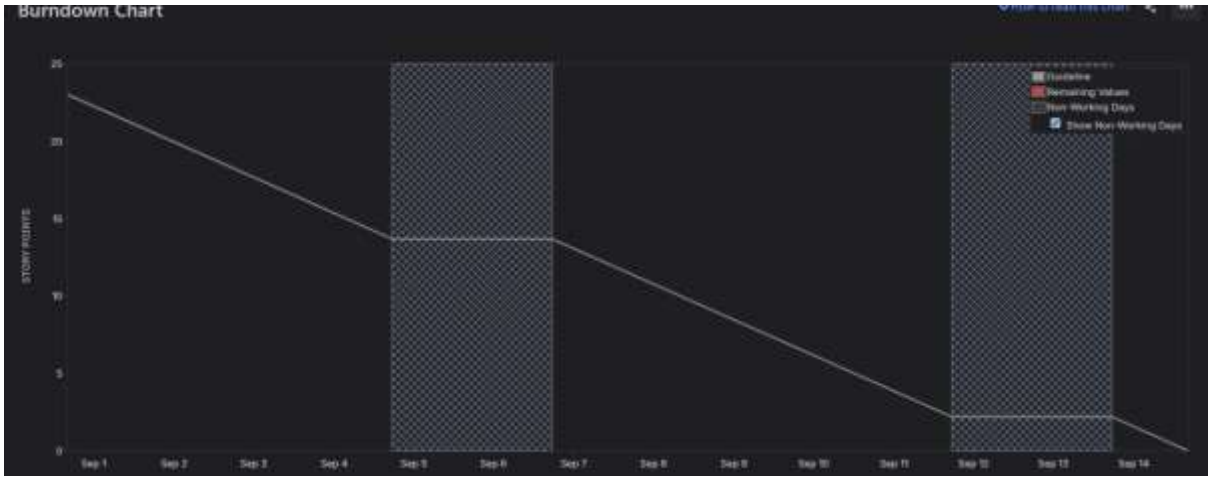

us estimate the complexity and uncertainty of different activities, especially when comparing tasks such as database cross-referencing with simpler baggage status updates.

Using the Active Sprints board also showed us the importance of continuously monitoring the progress of work. Visual tools such as the Sprint Board and Burndown Chart make it easier to identify progress, maintain team coordination, and track whether the sprint is moving according to plan.

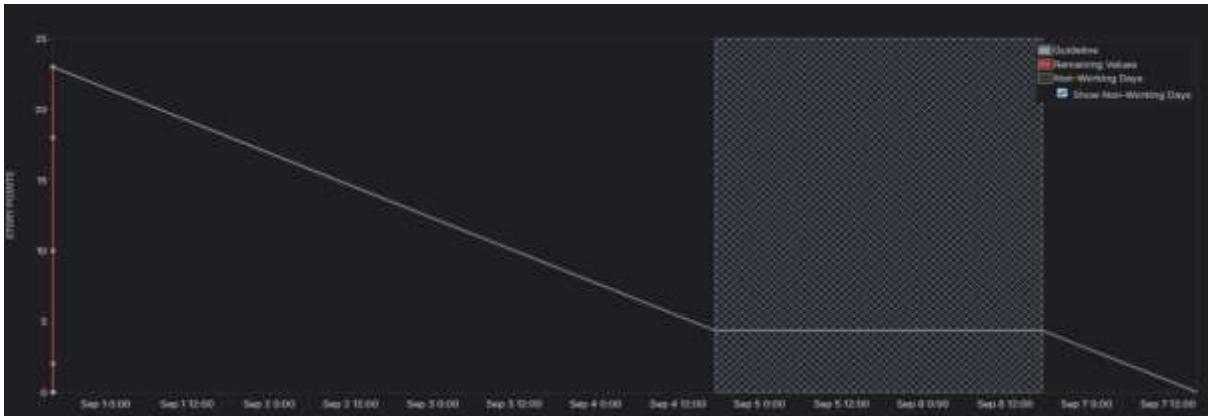

Overall, this simulation helped us connect the Agile concepts learned in theory with their practical implementation using Jira and gave us a better understanding of sprint planning, estimation, task tracking, and project management.

## BURNDOWN CHART

WEEK DURATION 1:

WEEK DURATION 2:

## ***Reflection Questions:***

**1. Did your estimations reflect the actual effort?**

Yes, our estimations were mostly close to the actual effort required. Some tasks took slightly more time because of the complexity of tracking baggage and handling compensation workflows, but overall the story points gave us a reasonable estimate.

**2. Was your backlog well-prioritized?**

Yes, our backlog was prioritized based on the importance of the features to passengers and baggage service agents. Core features such as reporting lost baggage, tracking baggage scans, and generating recovery alerts were given higher priority.

**3. How did your simulated sprint align with your plan?**

The simulated sprint mostly aligned with our plan. We selected the high-priority user stories for the sprint and moved them from **To Do → In Progress → Done**. This helped us understand how the planned work could be completed within the sprint.

**4. What insights did the burndown chart give about your team's capacity?**

The burndown chart helped us understand how quickly our team was completing the planned work. It showed our remaining workload throughout the sprint and helped us assess whether our story-point estimation and workload were realistic for the team's capacity.
