

Use-Case Flow Specification

Airport Lost Luggage Claim & Tracking Portal (Problem Statement #30)

PES University - Dept. of CSE | SE Lab 1

Use Case ID & Name: UC-01 Submit Lost Luggage Claim

Primary Actor: Passenger

Secondary Actor: Baggage Service Agent

Target System: Airport Lost Luggage Claim & Tracking Portal

Preconditions:

1. Passenger possesses a valid Flight Booking Reference (PNR) and Bag Tag number.
2. Portal is active and connected to global transit scan databases.

Postconditions:

1. A new Baggage Claim record is initialized with status 'Submitted' and assigned a Claim Reference ID.
2. Automated background search (FR-001) is triggered across connected airport terminals.

Main Success Scenario:

1. Passenger navigates to the portal and selects "File Lost Baggage Claim".
2. System prompts passenger to enter PNR, Bag Tag Number, and Contact Details.
3. Passenger inputs required details and submits the form.
4. System authenticates passenger credentials («include» UC-03: Verify Passenger Identity).
5. System validates bag tag format and verifies against flight manifest.
6. System generates Claim Reference ID, sends confirmation notification, and starts automated cross-referencing.

Alternate Flow (A1: Invalid Bag Tag Format):

1. At step 5, system identifies invalid bag tag format.
2. System displays error message: "Invalid Bag Tag format. Please enter a valid 10-digit numeric tag."
3. Passenger re-enters correct bag tag number and resumes from step 4.
